# **CUTHBERTSON WATER BUFFALO**

For sheer efficiency under 'impossible' conditions there never has been a crawler-tractor to measure up to the Cuthbertson WATER BUFFALO.

It will haul 10-ton loads over quaking swamp, climb hills up to 1 in 1 and remain perfectly water-tight in even 4 feet of water, and can be made fully amphibious.

Solidly built, revolutionary in design, the WATER BUFFALO has an all-welded steel water-tight hull mounted on 24", 30", 36" or 48" wide Cuthbertson flexible rubber tracks which are scientifically designed to develop a ground pressure down to 1½ lb. p.s.i. It is powered by the famous Albion 90 h.p. 4-cylinder high economy diesel engine and fitted with the Albion 5-speed gearbox.

Wherever it has been employed—on the reclamation of waste lands in Scotland . . . oil exploration in Nigeria and in the marshes of Basra, the WATER BUFFALO has more than proved itself to be superior to any similar type of vehicle. And, remember, the WATER BUFFALO is backed by a world-wide spares and service organization that is available anytime—anywhere.
